PE Spigot fittings

General benefits of plastic piping systems

Plastic piping systems offers many advantages in terms of efficiency, quality and safety. To mention at this point, the corrosion and stress cracking resistance, due to the material properties of plastics. Plastic pipes have a good hydraulic behavior due to their smooth surface and therefore, in contrast to, for example, metal pipes, significantly lower pressure losses. Compared to conventional materials, PE is characterized by its low weight. This ensures easy handling during installation.

Easy and safe installation

The installation by means of coupler-, butt- and electrofusion welding is extremely efficient and ensures a fully welded pipeline system with a service life > 50 years.

Highest quality standards

We primarily ensure quality via our DIN EN ISO 9001:2015 quality management system. As a global acting company our third party monitored production is complying with national, European and international quality standards and guidelines. You too can benefit from our huge range of DVGW-certified fittings.

Delivery program:

- Dimensions d 90 up to 2500 mm
- PN 10 and PN 16
- various SDR-Classes
- Customized solutions on request
- other materials on request

product data base

Product overview:

We provide you with high-quality and efficient solutions for applications in supply and disposal. In addition to our high-quality standard and special fittings, seamless bends, electrofusion fittings, pipes and hollow bars and solid rods, we also offer suitable welding equipment for joining and welding technique.

Our extensive product range gives you the possibility to obtain every-thing from a single source and for almost every building project. See for yourself.
